

FLUKE®

"After a three-story fall, my Fluke clamp meter still works. Climbing my ladder to the top of a roof, I slipped and had to drop my tool bag. It landed on cement, three stories down. I found my Fluke 335 in 18 pieces, but what amazed me is I could turn it on and it still made measurements."

Chuck Gerth

While Fluke certainly doesn't recommend you use a tool in this condition, it proves the extreme endurance of our clamp meters.

Fluke ruggedness is no accident. Inside and out, every component of a Fluke clamp meter is designed and built to be rugged, reliable and safe. Then they're tested to extremes: from impact and vibration tests, to lightning strike simulations and a five-day soaking. Don't you deserve a clamp meter this tough?

Fluke. Keeping your world up and running.™
