POWER of Fluke Thermal Imagers

Ti300

Designed to give you instant focus. LaserSharp® Auto Focus, a proprietary feature only from Fluke, uses a built in laser distance meter that provides speed and precision. The laser driven target detection pinpoints the target while the camera focuses and instantly captures a precisely focused high quality image.

TiS75

Capture professional quality images with 320 x 240 resolution and analyze faster than before with patented IR-Fusion® Technology with AutoBlend™. This technology combines a visible light and infrared image into one, with the ability to adjust blending levels—giving you the details needed to analyze the problem and clearly identify the location, so you can work quickly and confidently. Quickly and easily attach a digital “note” to each IR image with IR-Photonotes™, so you never have to match up hand written notes to an image again.

All models come with Fluke Connect^{®2}

All model thermal imagers come standard with Fluke Connect which gives you greater data management and reporting capabilities. With more and more of a need to integrate reporting and documentation of your facilities' health, the Fluke Connect software system allows you to view different measurements—thermal, mechanical, electrical and vibration—from the same piece of equipment at the same time and securely store and manage your images from anywhere with WiFi upload to Fluke Cloud™ Storage.

¹Promotional discount varies based on camera model and currency.

²Fluke connect is not available in all countries.
